

NINE MORE WOMEN WANTED

to join the New Home Sewing Machine Club. Sale closes positively tomorrow night. Do you realize what the club means? It means first: That you get the best sewing machine made at the spot cash price. Second—that you have the opportunity of paying for it under the most favorable conditions.

Third—that this sewing machine is guaranteed indefinitely and represents a life time investment. Now about joining the club. It costs you but one dollar. You get the Spot Cash Price. The machine is delivered at once. Expert instruction all this week free. Remember the price is only \$37.50 for the best one. Don't let some other woman get ahead of you. Let us have your name today.

WATKINS BROTHERS, INCORPORATED.

PREPARED ROOFING

Get your roofs in shape to stand the winter storms. Our prepared roofings are the best, cheapest and most durable made, easily put on.

Amatite Roofing

Waterproof and fire resisting. Rolls 32 inches wide, contain 110 square feet, \$2.00 a roll.

Everlastic Roofing

A wool felt saturated with preservative, pliable and elastic, 36 inch rolls of 108 square feet.

Everlastic, 1-ply \$1.50 roll
Everlastic, 2-ply \$1.75 roll
Everlastic, 3-ply \$2.00 roll

Neponset Red Rope Roofing

Case's Red Rope Roofing
Tar Roofing, 1, 2 and 3-ply
Roofing Caps and Nails

The F. T. Blish Hardware Co.

The work of resurfacing East Center street has been completed between Manchester Green and Pitkin street, but between Pitkin street and the corner of Porter street the road is torn up not only by road builders but by men in the employ of Cheney Brothers, who are laying water and sewer pipes. Automobiles traveling between the Center and the Green will do well for the present to go by the way of Porter and Pitkin streets.

Evangelist W. H. Hunter of Westbury, R. I., is conducting a series of meetings in McRoberts hall on Spruce street. Mr. Hunter came from Scotland 30 years ago and has traveled widely all over the United States. He has recently visited Galveston, Tex., and San Francisco, scenes of flood, fire and earthquake, and will speak Sunday evening at 7.30 on "God's Visitation of Nature and Grace." A baptism will follow the service.

The town road force is continuing the work of raising the east side of Main street between Bissell street and Birch street. Gravel is now being carted on in front of the residences of C. E. House, H. B. House and Mrs. Susan Bissell, and what was recently a grass plot will soon be resurfaced and hardened and incorporated into the traveled way.

THE BURNED SCHOOL BUILDING.

SCHOOL BUILDING BURNED

Ninth District—Monstrosity a Thing of the Past

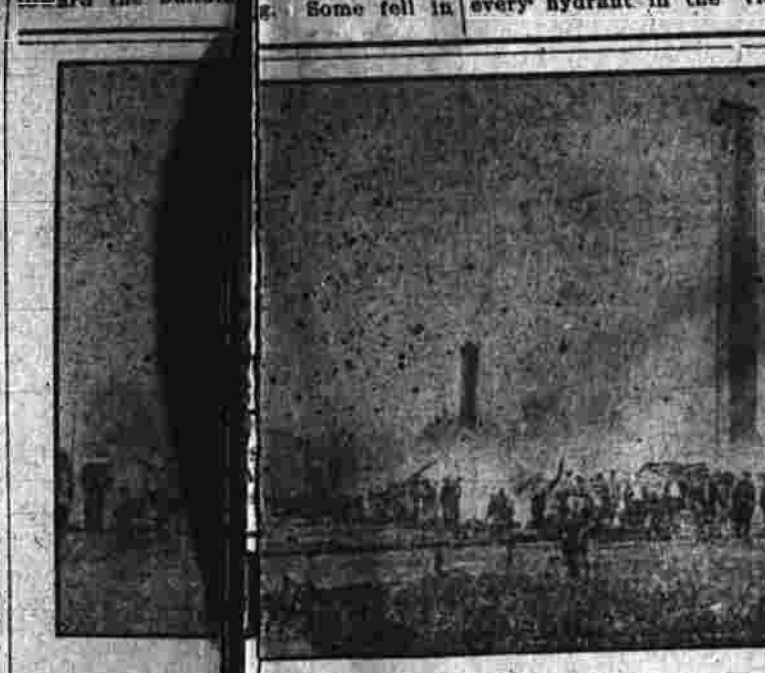

A THOUSAND CHILDREN AND TEACHERS MAKE WONDERFUL ESCAPE.

The Ninth district school building, a three story frame building with a two story all at the east end, caught fire almost as soon as the hose men on the opposite side of the school and little effort was made to stop it. The building was soon blazing from ground to roof on the north side, but before the flames had secured a good hold a corps of salaried workers under the direction of Police Captain Madden was at work carrying out the books and papers. Everything was taken across Wells street and deposited in yards well out of reach of sparks. The library comprises about 15,000 books.

The first floor was occupied by the adults' library and reference room and the second by the children's book room. The librarians, the Misses Louise and Margaret Bartlett, had apartments on the third floor, as did Miss Marcella Conklin, a stenographer employed by Cheney Brothers. Their belongings together with furniture were saved by Charles Gustafson, a fireman. The building was formerly the home of Rush Cheney and stood on the site of the present residence of his sons, H. G. and R. Cheney. It was moved to its new site about 30 years ago and remodeled for library purposes. Before that the library was located in the basement of Cheney hall. Miss Margaret Bartlett, who with her sister superintended the working of sorting and piling the books after the danger had past, said that practically all the books and library belongings had been saved. The library burned almost as rapidly as the school house and was down to the sills nearly as soon. As the wind was blowing from the south and east the flames did not spread to the south side of Wells street.

Business Section Threatened

At 2.30 o'clock the Rogers block was ablaze and the firemen were pouring water on the Steinberg stable and business block a large wooden building in the rear of the Rogers block and fronting Eldridge street. This building was in great danger and all the horses and carriages in the stable were removed to a place of safety. The heat from the burning school building was so intense that the firemen standing in School street pouring water on the rear of the Watkins building were obliged to wear themselves in wet blankets. At 3.40 four buildings on School street were burning and the library building on Wells street had caught. Under the direction of Miss Mary Cheney and Captain Madden men every hydrant in the vicinity and

The Ruins. View from School and Main Streets. Taken This Morning.

CHENEY BROTHERS ACT PROMPTLY

Generous Offer to Ninth District—Will Spend \$200,000 if District Will Spend \$60,000.

LIBRARY AND RECREATION BUILDING PROMISED

The Imperial system from which the building for a school was to be erected, was abandoned in favor of a more substantial one. Cheney Brothers, who are the property of Cheney Brothers, built and maintained by them under an agreement made with the district many years ago when the location of the district school building was a matter of dispute. The fine high school building opposite the burned building is also the property of Cheney Brothers and the free use of it is given to the district. With the building of the Lincoln school, the district was for the first time called upon to foot the bill. But as Cheney Brothers are by far the largest taxpayers in the district, they indirectly paid for the greater share of this school building also. From the action taken by the directors of the firm this morning, it is evident that they are willing to confine their generosity to the district on the condition that the district itself will assume some of its growing responsibilities. This is the official record of the meeting.

Meeting Held in South Main

A meeting was held in South Main street, Connecticut, on October 24, 1913. It was voted that Cheney Brothers will present the following proposition to the Ninth school district, to wit:

- 1. To erect an addition to the Lincoln school building of not less than eight rooms.
2. To build a new school of not less than eight rooms, on land in the western part of the district, and to be given by Cheney Brothers, and on plans subject to their approval.
3. To support and maintain recreation grounds, gymnasium and buildings including a library.

Then Cheney Brothers will agree.

- 1. To erect on the old East school lot a school building designed to accommodate approximately 500 children, including facilities for conducting courses in sturd, cooking, sewing, manual training and physical culture, adequate for all of the children of the district.
2. To erect on the same lot a recreation building and a library building in the same lot as a separate building.
3. To rent these buildings to the district at a rental of one dollar (\$1.00) a year for school and recreation and library purposes. Either Cheney Brothers or the Ninth school district to have the right to cancel the lease upon notice to the other party two years in advance of the date of such cancellation.

A member of the firm told a Herald representative this afternoon that this proposition would mean an expenditure on the part of the firm for school, recreation and library buildings of \$200,000. It would mean an expenditure to the district for an addition to the Lincoln school and for a new west side school of about \$60,000.

That this generous offer will receive the hearty approval, not only of the school board, but of the voters of the district, is our confident belief. The plan is an excellent one. It will divide the great school into four units, all conveniently located, and it will give the district a much needed recreation building and public library building.

People passing the old Cone wagon shop at the Green gave in surprise at the changed appearance. For the first time in over 60 years it is receiving a coat of paint. The building is 101 years old.

SELECTMEN WORK LATE

Toil Over Town Business Until Two in the Morning.

PETITIONS AND PROTESTS

Road Superintendent Resigns—To Drain Main Street—Minor Business.

The selectmen hung up a new long session record Tuesday evening, or rather Wednesday morning, for it was nearly two a. m. when they finally adjourned.

Attorney J. A. Howard, representing the Asher Bailey estate, had a proposition to offer concerning Florence street. It was in regard to widening the street and was made to the old board, but as the matter had not been settled, Mr. Howard thought it wise to bring it before the new board.

Protest Against Pest House. Adolph Knoifa of Middle Turnpike presented a petition signed by residents of the street and protesting against the location of the new pest house.

Hamilton Metcalf asked for permission to pick berries in the Center Park. Permission was granted with the understanding that the berries be picked under the direction of the park superintendent.

Thomas Doyle petitioned for lights on Lilac street. The street is only 20 feet wide and does not belong to the town. It was pointed out that other private rights of way have lights and the people on Lilac street feel that they should also be considered.

Ellsworth Resigns. Through Selectman Rogers, the assistant road superintendent, J. A. Ellsworth, presented his resignation to take effect November 1.

In regard to a bond. The board was informed that the company could obtain a three years' maintenance bond. William Grady, president of the company, asked to have a new contract drawn up and the board decided to have this done, and it was agreed that the highway committee and Judge Wood should meet with representatives of the company Wednesday and draw up a new contract.

H. O. Bowers notified the board of his acceptance of the appointment as tree warden, as did J. F. Bowen as park superintendent. The ninth district school board sent in the nomination of J. D. Henderson, sr., as trustee officer in that district.

Dr. D. C. Y. Moore appeared in regard to health matters. He reported that the new health board favored the location of the new pest house, although they had nothing to do with locating it.

The secretary read a petition for street lights on Middle Turnpike east of Manchester Green to be extended as far as the Bolton line. The petition was referred to the lighting committee.

Selectman A. E. Bowers presented the report of his investigation on the Main street widening matter, a full account of which appeared in Tuesday's issue of The Herald. The report was accepted and Mr. Bowers was thanked for the good work he had accomplished.

The question of providing suitable drainage for the street came up and the board voted to proceed to this work. It will be necessary to obtain accurate estimates of the cost, hold hearings and finally assess benefits and damages.

Selectman A. E. Bowers suggested that gravel for Woodbridge and Miner streets be secured from a pit on Mather street owned by Michael O'Brien.

The board voted to insure the voting machines for a period of five years, the insurance to be placed by the chairman with the agent who issued the temporary policy.

the superintendent to secure requisitions for articles as is now done under the new bookkeeping system. The highway committee was empowered to remove buildings which now encroach on Maple street. It is proposed to do the work between now and spring.

About one o'clock the board took up a number of bills, including school bills, and after these were out of the way some of the board favored adjourning, but other members felt that they might as well make a night of it and get a whole lot of things done. It was voted to empower the highway committee to look into the matter of securing a new road superintendent.

It was voted to borrow \$20,000 for current expenses, there being \$8,473 in the treasury, most of which will be needed before the November meeting.

Are Chestnuts on Blighted Trees Poisonous?

Several cases have lately been reported from this section of death or illness attributed to the eating of chestnuts that were supposed to have been made poisonous by the chestnut tree blight. It would be unsafe to say that such infection was impossible, but it is certain that it has not yet been demonstrated and on the facts presented the probability is very small.

Backyard Thieves.

Last Monday night an entire line of clothes, a week's washing, was hung out at Mrs. L. S. Emmons's place on North Main street, and Tuesday morning when Mrs. Emmons woke up she found her line had been entirely stripped. Not a shred of the washing was left.

The other evening a North School street man was about to retire. He had turned out his electric light and hesitated to look out of the window. In the moonlight he saw a man going through his backyard carrying a bag full of something. He called his wife's attention to the man and in her excitement she cried, "Shoot him! Shoot him!"

The Arnold automatic draft regulator saves one-third your fuel. Ask W. E. Hibbard.—A.V.

A COURT OF PROBATE HELD AT MANCHESTER, within and for the district of Manchester, on the 22nd day of October, A. D. 1913. Present OLIN R. WOOD, Esq., Judge.

IN THE CLUTCH OF BLACK ANTS.

Kansas City Having an Awful Time—What It Means to Be Beleaguered With the Biggest Ants That Grow.

(Kansas City Star.)

Kansas City is beleaguered fore and aft, above and below, by an invading army of big, black ants—buffalo ants, the largest specie of the ant family. These must have been in the mind of the patient Job, who said in his proverb, "The ants are a people not strong, yet they prepare their meat in the summer."

The ant is a great worker and a great forager, yet he lays up nothing for winter. The black ant, like the black bear, hibernates in the winter and lies dormant. Many scores of people in Kansas City wish most devoutly that the ant would lie dormant both winter and summer.

The true name of the black ant, the name recorded in all the books on entomology, is formica niger. This animal subsists upon the sweet juices and saps of plants, the fluids extracted from berries and fruits and from the stems of flowers.

The long drought in the past summer compelled the ants to organize foraging parties and to resort to all manner of brigandage. No better bushwhacker ever lived than the black ant. The candy merchants are especially aggrieved on account of the invasions of the formica niger.

The ant from time immemorial has been the acknowledged model for wisdom and industry in which this creature is not surpassed even by the honey bee. These two insects are very much alike in their social, political and military habits.

munity is divided into three or more classes. There are workers without wings. The males and females have wings for a few weeks and they rise into the air, often to great heights. Descending, they cut off the wings as mere impediments and at once enter the ground and begin excavations for the abodes of the new colony about to be formed. This takes place early in the summer.

The soldiers and the foraging parties are perhaps the most interesting characteristics of the ant den is the observance of sanitary requirements. Among ants, as among human folk, the first thought is necessarily of food. While the nurses remain at home attending the helpless young the foragers go forth and tap plants for juice which they carry home for the general consumption.

Like all generous hearted people, the ant delights in the comforts and coziness of a warm fire as the cool weather approaches. On a frosty morning a squad of formica was shaken out of a candy box, where they had been feasting, but were now curled up in the embrace of death.

APPLES MUST BE LABELED.

Frank Confession of What That Will Mean in Colorado. (Grand Junction Dispatch to the Denver Republican.)

After this when you eat an apple you will know exactly what variety it is. The pure food experts in Washington have notified shippers of Colorado apples that hereafter an apple must be branded for exactly what it is.

The Black Ben, another Colorado apple famous for its color and flavor, has also been consigned to the "junk heap." It is a Gano. There are other names under which Grand valley and western slope apples have been shipped that will be heard no more.

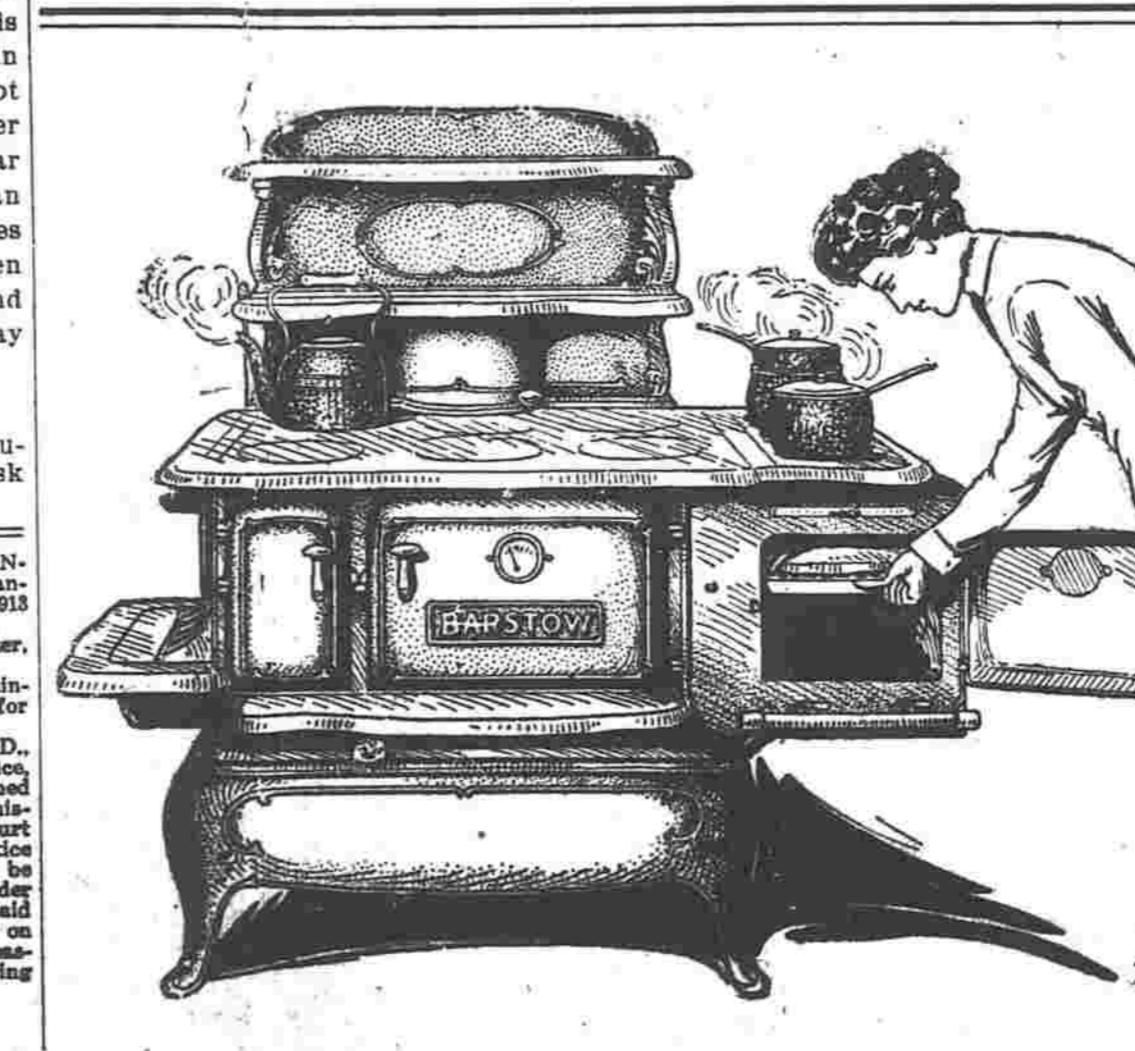

The ant from time immemorial has been the acknowledged model for wisdom and industry in which this creature is not surpassed even by the honey bee. These two insects are very much alike in their social, political and military habits.

SCHOOL BUILDING BURNED

(Continued from Page 4.)

action had won the lives of nearly a thousand children from smoke and fire. Half an hour before she had been sitting quietly in her office in the burning building. Since then the supreme moments of her life had been lived. She had led her brood to safety, calmly and surely, and now with difficulty she controlled her emotions.

At first Miss Bennett declined to talk, but at length she told in a few words her simple story. How the boy had run into her office with the news of the fire; how she had run to the library and confirmed the news; how she had instantly sounded the general alarm, cutting her hand on the glass front of the box; how she had remained in the building until the last child was out.

Just then someone burst into the room exclaiming, "Your own home is on fire!" meaning the Eldridge house where she roomed. Donning her wraps she hastened away to save her belongings. Fortunately the incipient fire in the Eldridge house was quickly extinguished and Miss Bennett was not called upon to undergo another ordeal.

A MONSTROUS BUILDING.

Huge Pile of Wood Which Presented Ideal Conditions for Conflagration.

The burned building was a monstrosity. It had grown by degrees in the last 40 years from a four room, one story building to a structure 360 feet long, about 80 feet wide, two stories high, with a basement beneath and with a third story covering a considerable portion of its area. This immense building was of wood, mostly southern pine, and its partitions throughout were sheathed with matched southern pine finished with shellac. The building had long been recognized as a tinder box and the authorities depended for the safety of the children upon the many means of exit and fire escapes provided and upon the fire drill. By good luck the margin of safety, though small, proved sufficient so far as human life was concerned, although the loss of property is heavy.

A great many people expressed themselves last night as glad that the building had gone. It is safe to say that no such structure will ever again arise in this town. The burned building was a menace not only to human life but to the safety of the entire business section. It produced a fire the equal of which would be hard to find in any community. Such an immense structure of inflammable wood in the midst of a populous section is rarely met with. When it once caught fire, no power on earth could save it. Within ten minutes the building was in a roar from end to end of its enormous length and the heat from it was so intense that no firemen could get within two or three hundred feet of it. Some have shown disposition to criticize the South Manchester fire department, but this is unjust. The whole Hartford fire department could not have saved the building. The fault was not with the firemen—it was with the building.

The Origin of the Fire.

From all that can be learned, the fire started in a waste basket beneath a desk in the library room used for the storage of school books which was located on the south side of the building about 25 feet east of the chimney shown in the foreground of our picture of the building. What should have started a fire there can only be a matter of conjecture, but the testimony of the boy who notified Miss Bennett of the fire and of Miss Bennett herself, who a minute later saw the desk over the waste basket on fire, is sufficient evidence that this is where the blaze started.

The rear addition, the latest made to the building, was built in 1892. It extended east 190 feet. The corridors of the two sections were united, making a continuous hall 283 feet long. Since the construction of this addition, special precautions have been taken to guard against fire. Night and day watchmen have been maintained, fire extinguishers and hoses have been kept in convenient places, iron outside fire escapes have been maintained and a private fire alarm box had been installed in the building.

HOW FIRE WAS FOUGHT.

Manchester Firemen Met Blaze Stubbornly With Ten Streams—Hartford Company Added Three More.

Chief Atwood says that the work of the firemen yesterday was all that he could have desired. They were promptly on the spot and first attempted to carry a line of hose into the front door of the building, but were soon driven back by flame and smoke. From that time on it was

simply a question of getting in front of the fire and trying to head it off. At first the wind carried the flames toward the northeast and the firemen poured streams on houses in that direction. Then the wind veered, carrying the flames toward the northwest, and the firemen followed them and protected the Watkins block. The heat was intense and repeatedly burned the cover of the hose, causing it to burst. Then it would be necessary to shut off the water while the broken hose was taken out.

In some instances the hydrant was so near the burning building that the heat made it impossible for the firemen to stand at the hydrant and in turning the water off and on to permit the repairs of hose, men swathed in wet blankets were sent in relays, each one giving the wrench a turn before running back to fresh air.

The South Manchester firemen had ten streams on the fire, scattered as widely as possible in order not to reduce the pressure on any one main. When the Hartford engine arrived it was coupled to a Main street hydrant in order to get water from the largest main. It furnished two heavy streams, which were afterwards increased to three, without materially diminishing the pressure on other lines. Two force pumps at the mill were run to their capacity during the fire and aided materially in keeping up the pressure. Four streams were left playing on the ruins until nine o'clock at night and two streams were kept going all night. Chief Atwood says the fire demonstrates the need of one or more pumping engines to supplement the present apparatus of the fire department.

Teacher Painfully Burned.

Miss Alice Persons, teacher of music, after the children had left the building, thought that she had time to go to her room in the west end of the building and recover her purse, but she miscalculated the advance of the fire and smoke, and before she could get back down stairs was painfully burned. Her hair was partly burned from her head and her face and hands were blistered. Miss Condon, the art instructor, accompanied her to her home in Boston last evening.

Wire Service Disarranged.

The Southern New England Telephone Company had 56 lines out of commission south of Eldridge street and east of Main street, caused by a cable melting in Vine street. A new cable was substituted last night and the connections restored.

Heat Ignited Feathers.

Timely discovery prevented a fire in Watkins Brothers store at the time the blaze in the school building was fiercest. Ralph Nelson, employed by Watkins Brothers, accompanied by L. J. Richman, went to the upper floor and found a fire in some feathers which lay close to one of the windows. The intense heat had ignited the feathers through the glass. The fire was extinguished with slight damage. The windows on the east end of the building were cracked and broken by the heat and furniture which stood near the windows was blistered.

Three Cheers for Mr. Verplanck!
And Three Cheers for Miss Bennett!

And Three More for the Rest of the Teachers!
And Don't Forget Janitor Gleason!

BOARD TURNS DOWN SPECIAL TOWN MEETING.

On Opinion of Town Council Selectmen Decide Against Attempt of Voters to Regulate Charity Business.

What appears to be a new drive against Charity Superintendent J. S. Risley has been nipped, temporarily at least, by the refusal of the selectmen to call a special town meeting. The matter has been in the wind for several weeks, and Tuesday night took form when a petition signed by 20 voters was received by the selectmen. It called for a special town meeting to act on a proposition to combine the offices of charity superintendent and superintendent of the almshouse.

The question whether the town had power under the charter to regulate such a matter at once arose. It was contended that the appointment of a charity superintendent is a duty of the selectmen and that his department is under the supervision of the selectmen as agents of the town and that the voters have no legal authority to legislate in charity matters except through the selectmen. One or two members of the board contended that the board had no authority to deny the petition, as the statutes require that a town meeting be called upon petition of 30 or more voters. It was decided to refer the
