Consciousness Secret Discovery Is Related

Due Merely to Activity of Body's Enzymes. Chemicals That Produce Reactions.

Dallas, Tex., Dec. 29.—Discovery of the secret of consciousness was reported to the American Association for the Advancement of Science today.

Enzymes, it was found, are directly responsible for the body's conscious activity. The chemicals that produce both chemical and physical reactions are consciousness in the temporary falling apart of those enzymes.

The report was made by Prof. Frank H. Johnson of Princeton University and Donald E. S. Brown and Douglas A. Marsland of New York University.

Enzymes Self-Renewing. The experiment was done with a solution of the enzyme, trypsin. It was discovered that enzymes are self-renewing. They are breaking down and being replaced by new ones.

But all this had been done only in the laboratory. The experiment was done with a solution of the enzyme, trypsin. It was discovered that enzymes are self-renewing.

They gave the microbe alcohol, which, of course, is a by-product of their metabolic activity. Each time the microbe was given a new dose of the enzyme, it gave a new result.

But if the enzyme were to be given a new dose, it would give a new result. The experiment was done with a solution of the enzyme, trypsin.

False Reports Of Raid Given

Radio Listeners Asked To Be Watchful for Enemy Activities.

San Francisco, Dec. 29.—The Navy, disclosing that Japanese broke in upon an American broadcast to the Philippines with false reports of a bombing attack on San Francisco, asked radio listeners today to be watchful for such enemy activities.

An announcement by the Navy said listeners in Manila were assured that the broadcast was not a regular broadcast from the Japanese station KGEI.

The broadcast was interrupted by a message from the Navy. The report was made by Prof. Frank H. Johnson of Princeton University.
