When both houses have okayed the money. This is an important part of this government's postwar plans and for this reason: In return for the money, Britain agrees to end some of her trade practices which hurt American trade. She agrees to join this country and others in helping im prove world trade. Would Mean Better Business Better world trade would mean

better business for the United States since it would mean bigger markets in which to sell American we don't turn all of the \$3,750,-000,000 loan over to Britain in a lump sum. Between the time Congress approves and Dec. 31, 1951. Britain can borrow all or any part

She can't borrow any of it after that date, if she hasn't borrowed all of it by then. The money actually borrowed will be called the principal of the loan. The interest on it will be slightly less than 2

Britain doesn't have to start paying back any of the principal or the interest - until 1951. Starting then in 1951, she'll have to pay back principal and interest in 50 equal yearly installments. That will give her 50 years-or until 2001-to pay back. The yearly payments, including interest and principal, will be \$120,000,000, if Britain borrows the full \$3,750.

That interest rate-less than per cent-is less than Britain would have to pay if she tried to borrow the \$3,750,000,000 from It is about the same interest rate this government will have to pay when it borrows the \$3,750,-

000,000 in order to make the loan to Britain It's necessary for this govern ment to borrow the money, from American banks or by selling bonds to the American public, for akes in every year from Amerian citizens isn't large enough to ay all the government's exmaes. This extra expense, the oan therefore will have to b

> But the interest rate will such that we don't figure to lose on the deal, provided Britain will be able to pay back what she borrows and the interest on it. Top government officials and the ngressional committees which held long hearings on the loan say they think Britain will be able to pay back in full. Is the loan, just as a loan,

good business proposition since the interest rate is so low? No, says Fred M. Vinson, now chief justice of the Supreme court but secretary of the Treasury when the loan agreement was worked out with Britain. But he say it is a contract, and I think

we get benefits, at least in my judgment, greatly in excess o effect, said the same thing. By benefits, of course, they were the agreement, changes her trade methods and gives us a bigger and

She needs the dollars in the next few years to pay for the food and materials which the British people world trader will take Britain

some time.

Need Dollars To Do Buying
The British figure they will have
to spend abroad in the next few years between \$5,000,000,000 and \$6,000,000,000 more than they can sell abroad. To do that buying they need dollars. Why? they need to buy abroad with

with pounds sterling because of what they sold to Britain during the war when Britain was trying to save her dollars for buying othe things she needed in this country. factories to war week. This meant selling less abroad while

To Your Own Ear

(Editor's Note: This is the secon of three dispatches on frequency nodulation and the story of the man-made interference behind this otherwise staticless method of ralie broadcasting that the FCC is

ooking into this week). By Marc J. Parsons NEA Staff Correspondent New York, June 27—(NEA) Major Edwin H. Armstrong, inventor of FM-frequency modulation -says he has looked for more than decade for an analogy between FM and something that will be readily understood by persons not technically minded, and has failed. Nevertheless the basic principle of frequency modulation is comparatively simple. Sound and light travel waves at varying speeds, and the waves are measured in cycles. The light in your home probably is 60

cycles. That is, the wave actually ing is 25 cycles and on such a can notes, after it has left the and decreases in height in accordthe flicker ventional radio as for frequency (shown as the distance between Radio waves, the carrier waves modulation. To get anywhere, it each vertical wave on the carrier) that deliver sound from the broad- must ride a carrier wave, shown remains constant. In FM, sound casting studio into the radio in lower panel before it has taken wave rides "inside" carrier and sound waves are added to the much the same for AM as for FM. quency like an accordian. carrier waves and when the carrier waves reach your radio, the radio removes the carrier and the sound alone passes through the

Frequency Sets Cycle The frequency of radio carrier waves is determined by the cycle. Standard broadcasting is done on wave lengths between 550 and 1600 kilocycles, or 550,000 to 1,600,000 cycles. Broadcasting over this band is by the method known as amplitude modulation or AM. AM stations achieve the modulation of tone by increasing or decreasing the power used to transmit. On a 50,000-watt station.

# HERE'S WHY your Out-of-Town Calls may be delayed

during the busy war years. Our operators are trying hard to handle this rush. But the number of calls is still increasing, and the amount of additional circuits and switchboards we can obtain is limited by a nation-wide shortage of copper, lead, steel, cotton yarns and other materials needed to manufacture telephone equipment. So at times delays are unavoidable

THE SOUTHERN NEW ENGLAND

COMPANY

### HERE ARE Two Suggestions

Until we can obtain enough equipment, you'll encounter fewer delays by following these two suggestions:

. Whenever possible, make your out-of-town calls when lines are least busy - before 9:30 in the morning - or during the afternoon.

2. Give your operator a chance to report on your out-oftown calls. If you call her back to inquire about them, it adds to the congestion at the switchboard and slows up

> Telephone 9:30 A.M. to 12:00 Noon or better out-of-town and loca Call in the early morning or during the
