### DAMAGED BY THE FIRE

### NOW ON SALE

Our loss from the fire, thanks to the splendid work of the firemen, was not great. The greatest damage occurred on the second floor where the heat from the next building blistered the front of a number of dressers, chiffoniers and sideboards. The tops of others cere spotted by the water which came down from the fourth floor. This floor had to be dowsed to put out a fire which started in the finishing room. The water also started the veneers on several parlor tables and soaked the cushions of some parlor suites. The lace curtains on the first floor were dreuched as well as some of the portieres and couch covers. All of these goods have been put in the best order possible in so short notice and will be sold for what they will bring. Following is the list:

### Because Its Best

When a prospective piano customer realizes that there are over 80,000 PEASE instruments made and sold, it sort of adds a strong argument to the reason choice in the final selection.

The p rsonal knowledge of piano construction by the manager of our Piano Department permits us to place an unlimited amount of confidence in this great PEASE.

And because we had such great confidence is the reason why we are telling you about them-why we are advertising them over our name and advising you to make them your choice-all because we have studied them-seen them in their course of construction and know them to be the biggest piano value on the market.

Mange is a disease of swine prevalent in some sections of this country. However, it does not appear to be a common disease in the United States, generally, but judging from the number of swine mange in European countries, it would seem that it is a common disease there. The cause of swine mange is a very small animal parasite which burrows into the outer layers of the skin. The adult female lays eggs which hatch into young mites, and these go through the various stages of development in the outer layer of the skin of swine.
