Food poisoning according to the ablest physicians and health experts, is the cause of nine-tenths of the diseases that handicap the human race. The walls of the small intestines are lined with millions of small veins which take up nourishment from the digested food. From these veins this nourishment is poured as a part of the blood into the heart and distributes though the arteries to every part of the body.

Keep your stomach healthy by eating more Goetz's bread instead of so much meat and other heavy foods. You get all the nourishment the body requires without loading and clogging the system with indigestible and poisonous food.
