Bulletin No. 1

the Bethlehem Steel Company

The Senate of the United States has passed a bill to spend \$11,000,000 of the People's money

to build a government armor plant. The measure is now before the House of Representatives.

The mistake of the Bethlehem Steel Company has been that it has kept quiet.

It is and has been the policy of our Company to ideal with the American Government fairly

We shall henceforth place the details of our relations with the Government before

We are prepared to manufacture armor at any price which the Government itself

shall name as fair. THAT BEING SO, SHOULD \$11,000,000 OF THE PEOPLE'S

plant is necessary to secure armor more cheaply.

We shall make the mistake of silence no longer.

price for it than has any other great naval power.

A government plant cannot make armor any cheaper than we can do it; and-

SONEY BE WASTED TO BUILD A COVERNMENT PLANT?

It is said that manufacturers of armor have "gouged" the country in the past, and that a government

We have allowed irresponsible assertions to be made for so long without denial, that many people now believe them to be proven facts.

Henceforth we shall pursue a policy of publicity. Misinformation will not be permitted to go

The United States has for twenty years obtained the highest grade of armor and has paid a lower

Milk must show 3.25 per cent of fat to be up to Legal Standard. Bacteria below 10,000 per c. c. indicates milk of very good quality. Bacteris from 10,000 to 50,000 per c. c. indicates milk of good quality. Bacteria from 50,000 to 100,000 per c. c. indicates milk of fair quality. Bacteria from 100,000 to 500,000 per c. c. indicates milk of unsatisfac-

quality.

Bacteria from 500,000 to 1,000,000 per c. c. indicates milk of bad quality. Bacteria over 1,000,000 per c. c. indicates milk of very bad quality.

When milk contains over 500,000 per c. c. it indicates that conditions are unsatisfactory and should be inspected. The milk is usually too warm or has been kept too long.

Refractometer reading under 36 indicates watered milk.

In reporting dirt by percentage an arbitrary scale is used in which 100 per cent. clean indicates no dirt. Milk drawn and shipped under clean conditions should not grade below 30 per cent.

Test for preservatives made only when especially requested.

During hot weather in the larger cities it is very difficult to keep the number of bacteria below 100,000, but they should be kept below 200,000.

THE GENERAL GRADE is determined by combining the figures for bacteria, fat, refractometer and dirt, 100 being a perfect score in which the fat is 4.5 per cent, or above, the bacteria below 5,000, the refractometer 37.5 or above and the cleanliness 100 per cent.
