Milk must show 3.25 per cent of fat to be up to Legal Standard. Bacteria below 10,000 per c. c. indicates milk of very good quality. Bacteris from 10,000 to 50,000 per c. c. indicates milk of good quality. Bacteria from 50,000 to 100,000 per c. c. indicates milk of fair quality. Bacteria from 100,000 to 500,000 per c. c. indicates milk of unsatisfac-

quality.

Bacteria from 500,000 to 1,000,000 per c. c. indicates milk of bad quality. Bacteria over 1,000,000 per c. c. indicates milk of very bad quality.

When milk contains over 500,000 per c. c. it indicates that conditions are unsatisfactory and should be inspected. The milk is usually too warm or has been kept too long.

Refractometer reading under 36 indicates watered milk.

In reporting dirt by percentage an arbitrary scale is used in which 100 per cent. clean indicates no dirt. Milk drawn and shipped under clean conditions should not grade below 30 per cent.

Test for preservatives made only when especially requested.

During hot weather in the larger cities it is very difficult to keep the number of bacteria below 100,000, but they should be kept below 200,000.

THE GENERAL GRADE is determined by combining the figures for bacteria, fat, refractometer and dirt, 100 being a perfect score in which the fat is 4.5 per cent, or above, the bacteria below 5,000, the refractometer 37.5 or above and the cleanliness 100 per cent.

Sunday School League The Sunday School Athletic League comprising four teams will start the basehall season tomorrow. The Sunday schools to be represented will be the Center Congregational, North Congregational, St. Marys Episcopal and the South Methodist. The South Methodists won the championship in the Sunday school league for the past two years. Several of their players however have graduated from the league and passed on to the lists of older players in other clubs. As a result the other teams in the league have taken heart and will gird on their armour and endeavor to march on to victory.

The Famous "Old Bleach" Linens Direct to Us From Ireland

Since buying these goods, months ago, the "Old Bleach" Linen Company have ceased to give quotations on their products for the reason they cannot secure the class of yarns that they are in the habit of using in their fabrics. We deem ourselves fortunate in having such a goodly supply on hand.

The "Old Bleach" Linens are whitened on the grass, as in the days of our great grandmothers, without the use of the injurious chemicals of these modern times. These linens withstand the wear and tear of the Laundry better than most kinds. "Old Bleach" stands for perfection in linen. There are Towels, Huch-a-back, plain linens of all kinds, Half bleached Linens, Natural color Embroidered Linens etc. None genuine without "OLD BLEACH" stamu.

Why Not Face the Facts **About Armor Competition?**

To the People:

The policy of the United States Government for many years has made real competition in

The Government might have asked the three armor plants for bids and let the entire tonnage to the lowest bidder. That would have made competition effective.

The result of such a course would have been to drive two of the three manufacturers out of business, and leave the country with facilities of only one plant in time of need.

> The Government in fact has always asked for bids from the three manufacturers, but no matter what the price quoted, each year's business was divided among them

Armor makers serve but one customer—the Government, just as a public utility serves but one customer a community.

The solution of the public utility problem is regulation of rates.

The solution of the armor problem is for the Government to fix the price

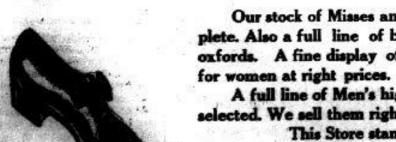

We voluntarily agree to accept any price fixed by the Federal Trade Commission Isn't acceptance of that offer better than the destruction of an industry built solely to serve the Government?
