LABOR PARTY GAINS IN BRITISH ELECTIONS

London, Nov. 2.—Avalanche reports today from yesterday's borough council elections throughout England and Wales showed appreciable gains for the Labor party, although they failed to make the clean sweep they had hoped for. Liberal losses were heavy. The Conservatives (Tory) broke even which caused surprise in some quarters in view of the forthcoming general election which is now expected in January or February with Premier Baldwin's protection policy as the chief issue. The results are being closely scrutinized by political leaders to get a line on public opinion and to make comparisons of party strength. Labor's strength will be the most important factor in the general election. Laborites are making plans for a vigorous campaign against the protection issue and in the first party to open a "political offensive." Leaders of the Labor party are active in all parts of England, Scotland and Wales. Premier Baldwin will make a speech at Manchester today when he is expected to renege arguments for protection. It is probable that he will refer to the status of foreign affairs, also possible touching upon the proposed reparations conference.

Rogers Describes Storage Batteries For Radio Use

Local Man Gave Interesting Talk Before Rhode Island Engineers Club Last Evening.

Disregarding the fact that he was addressing only technical men, Willard B. Rogers, of Hartford, general manager of the Fuller Storage Battery Company, of Hartford,

source, we find ourselves confronted with the necessity of finding far better in getting western something in which to create our broadcasting during these hours of radio silence.

WILLARD B. ROGERS New Haven, and Providence, speaking before the Rhode Island Engineers Club in Providence Tuesday evening, defined storage batteries and what is called "portable" batteries.

Probably no subject, especially of a technical nature, could be assigned to a man giving more latitude than Mr. Rogers in his presentation.

I suppose I can fall back upon the generally accepted explanation of "What is Radio?" by using that line-worm illustration of the circuit as a point of view.

In the middle of when we place a wire in the energy lines, in raising and lowering it, furnishes the power which starts a propagating wave through the ether.

Following along this line of thought and it is to be recalled that an antenna is a conductor. There is, by 11 p. m., the effect of the antenna is somewhat diminished.

Turning now to the parts actually played by storage batteries, we know that a battery is necessary tank but one that could be well executed by any other form of best that could be proposed.
